

MINOR PROJECT #1 REPORT

MY DATA, MY STORY

Personal Activity Intelligence Report

Student Details	Info
Student Name	Yashodip Prabhakar Deore
Registration / Roll No.	12620514
Program / Section	MCA
Activity Recording Period	13 August 2026 to
Date of Report Generation	17-09-2026

1. Activity Data Summary

Particular	Value
Expected number of days	40
Valid days recorded	31
Missing days	
Invalid / excluded records	0
Average Sleep/day	6.16 hours/day.
Average Fitness/day	15.81 min/day
Average Study/day	295.81 min/day
Average Coding/day	78.71 min/day.
Average Class/day	255.48 min/day
Average Other Activities/day	321.45 min/day
Average Free / Unaccounted Time/day	103.26 min/day.

2. Index Values

Enter the final value generated by your Python program. The activity indicators are based on simple averages across valid recorded days. PAI is calculated using the predefined weights shown below.

Index Name	Acronym	Formula	Value to Enter
Personal Activity Index	PAI	PAI = 0.15(TPI) + 0.20(AAI) + 0.15(PhAI) + 0.20(SRI) + 0.15(TUI) + 0.10(EI) + 0.05(DCI)	404.19
Tech Productivity	TPI	TPI = Average(Coding Time per valid recorded day)	78.71 min/day
Academic Activity	AAI	AAI = Average(Study Time + Class Time per valid recorded day)	551.29 min/day
Physical Activity	PhAI	PhAI = Average(Fitness Time per valid recorded day)	15.81 min/day
Sleep & Recovery	SRI	SRI = Average(Sleep Time per valid recorded day)	369.48 min/day
Activity Balance	ABI	ABI = Average(Free / Unaccounted Time per valid recorded day)	103.26 min/day
Time Utilization	TUI	TUI = Average(Total Tracked Time per valid recorded day)	1336.74 min/day
Experience Index	EI	EI = Average of daily (Feeling Score + Satisfaction Score + Energy Score) / 3	3.49 / 5
Data Continuity Index	DCI	DCI = (Valid Recorded Days / Expected Days) × 100	100.0 % %

Formula references: All time values are taken directly from the activity record and averaged across valid recorded days. Feeling, Satisfaction and Energy are scored using the prescribed 5/4/3/2/1, 5/4/3/2/1 and 3/2/1 scales respectively. PAI uses the predefined weights shown above. DCI rewards complete and continuous recording from 13 August 2026.

3. Key Findings from My Data

No.	Correlation/Observation	Evidence from my data
1	Sleep ↔ Energy	-0.3
2	Study ↔ Satisfaction	0.33
3	Coding ↔ Energy	0.17
4		
5		

4. Findings About Myself (100–200 words)

Write about what your activity data revealed about your habits, priorities, consistency, balance, academic/technical engagement, and the relationship between activities and your reported experience

My activity data revealed that academics are a major priority in my daily routine. I spent an average of 295.81 minutes studying and 255.48 minutes attending classes each day, showing strong academic engagement. I also spent 78.71 minutes per day coding, which indicates that I am consistently developing my technical skills alongside my studies. However, my average sleep was only 6.16 hours per day, while fitness averaged just 15.81 minutes, suggesting that academic and technical activities receive more attention than physical recovery. My average free or unaccounted time was 103.26 minutes, showing that some time could potentially be managed more effectively. The correlation between study and satisfaction was positive (0.33), while coding and energy had a weaker positive relationship (0.17). Sleep and energy showed a negative correlation (-0.30), although this relationship should not be interpreted as causation. Overall, the data shows that I am academically and technically engaged, but maintaining better balance between productivity, physical activity, recovery, and personal time is an important area for improvement.

5. Areas and Ways to Improve My Lifestyle (100–200 words)

Identify the areas you would like to improve and describe specific, realistic ways in which you intend to improve them based on the evidence from your data.

The main areas I would like to improve are sleep, physical activity, time management, and overall balance. My average sleep of 6.16 hours per day indicates that I should aim for a more consistent sleep schedule and gradually increase my sleep duration toward 7–8 hours. My fitness average of only 15.81 minutes per day is another area for improvement. I intend to include at least 30 minutes of walking, exercise, or another physical activity in my daily routine. Since I already spend substantial time studying, attending classes, and coding, I will focus on improving the quality and organization of this time rather than simply increasing it. I can use a daily timetable with dedicated blocks for academics, coding, exercise, relaxation, and sleep. I will also review my activity data weekly to identify patterns and adjust my routine. Finally, I will reduce unnecessary or unplanned time and use some of it for recovery or meaningful personal activities. These changes should help me maintain productivity while achieving a healthier and more sustainable routine.

6. Student Declaration

I confirm that the values entered in this report have been generated from my submitted activity data using my Python program and that the report represents my own analysis.
